Education

Monash University Malaysia Subang Jaya, Selangor
Bachelor of Computer Science in Data Science *Feb 2023 — Nov 2025*

- Relevant Coursework: Data Structure and Algorithm, Data Management and Warehousing, Data Modelling, Computation Theory, Data Analytics, Data Visualization, Object-Oriented Programming, App Development in Android, Big Data Processing, Discrete Math, Continuous Math, Microeconomics

Monash College Subang jaya, Selangor
Diploma of Higher Education Study in Information Technology *feb 2021 — Nov 2022*

Work Experience

Data Analyst Trainee in CDP Team Nov 2024 — Feb 2025
SynergyXYZ *Puchong Jaya, Selangor*

- Research Customer Data Platforms vendors, document and evaluate their offerings.
- Formulate service CDP offerings for prospective client and compile a proposal deck on it.
- Compile technical documents surround a CDP tool.
- Plan overall directions of CDP team with supervisors.
- Gained experience in using Google Ads.

Volunteer Experience

Website Admin July 2024 — Nov 2025
PPI Monash Malaysia *Subang Jaya, Selangor*

- Plan and executing total revamp of PPI Eunoia Wordpress website.
- Publishing writtten and video content on the PPI Eunoia Website.
- Assisting in PPI Monash Event program, beyond web administration.

Projects

Patent Analyzer Python, Django, OpenAI, TogetherAI, QdrantDB, Selenium

- As a Final Year Project, my team and I implemented a patent document analyzer on TRIZ principles using a decoder LLM model.
- I implemented most backend components such as; automated text extraction using bs4, Chain of thought prompting, and hybrid RAG search through qdrantDB.
- Developed and adapted a manual classification method into chain-of-thoughts and modified vector search method.
- Delivered a deployable patent analysis platform capable of structured, principle-based insights from raw patent documents.

Autonomous Expense Agent Python, Gemini 3, Agentic MCP, AWS, YOLO, MongoDB

- Architected a multi-agent multimodal system using Google ADK, implementing structured output parsing and stateful artifact management for long-running financial workflows.
- Integrated Model Context Protocol (MCP) to unify tool functions across MongoDB transactions, Matplotlib data visualization, and Google Cloud Storage (Blob).
- Developed a YOLO-based computer vision pipeline to crop and pre-process receipt images, optimizing OCR accuracy and reducing downstream LLM token consumption.
- Deployed a Telegram-bot interface supporting MarkdownV2, real-time typing indicators, and multimodal data ingestion.
- **Upcoming**: Orchestrating a fine-tuning pipeline for Gemma 3 (GemmaFunction) to transition the agent to a privacy-centric, self-hosted open-source model.

Big Data File Processing of IoT Data PySpark, Kafka, Zookeeper, MongoDB, Matplotlib

- Designed and implemented a data warehouse schema in MongoDB for IoT data, defining collection relationships and an upsert strategy.
- Built a Kafka Pub/Sub system to ingest and process real-time streams from three distinct IoT sources.
- Used PySpark for real-time preprocessing, transformation, and custom anomaly detection via User-Defined Functions (UDFs).

- Persisted processed and joined data back into MongoDB and used change streams to trigger dynamic visualizations with Matplotlib.

Technical Skill

Languages: Python, Java, Golang, SQL, R, TypeScript, HTML, json.
Developer Tools: Wordpress(CMS), Git, Docker, Kafka, Spark, Huggingface, Github Action, MongoDB, QdrantDB.
Libraries/Framework:Matplotlib, Pandas, Flask, Google ADK, BeautifulSoup4, ScikitLearn, XGBoost.
