EDUCATION

Monash University Malaysia <i>Bachelor of Computer Science in Data Science</i>	Subang Jaya, Selangor <i>Feb 2023 — Nov 2025</i>
Relevant Coursework: Data Structure and Algorithm, Data Management and Warehousing, Data Modelling, Computation Theory, Data Analytics, Data Visualization, Object-Oriented Programming, App Development in Android, Big Data Processing, Discrete Math, Continuous Math, Microeconomics	
Monash College <i>Diploma of Higher Education Study in Information Technology</i>	Subang jaya, Selangor <i>feb 2021 — Nov 2022</i>

WORK EXPERIENCE

Data Analyst Trainee in CDP Team SynergyXYZ	Nov 2024 — Feb 2025 <i>Puchong Jaya, Selangor</i>
- Research Customer Data Platforms vendors, document and evaluate their offerings. - Formulate service CDP offerings for prospective client and compile a proposal deck on it. - Compile technical documents surround a CDP tool. - Plan overall directions of CDP team with supervisors. - Gained experience in using Google Ads.	

VOLUNTEER EXPERIENCE

Website Admin PPI Monash Malaysia	July 2024 — Nov 2025 <i>Subang Jaya, Selangor</i>
- Plan and executing total revamp of PPI Eunoia Wordpress website. - Publishing writtten and video content on the PPI Eunoia Website. - Assisting in PPI Monash Event program, beyond web administration.	

PROJECTS

QR Invite — Event QR Invitation System Golang, PostgreSQL, pgx, sqlc, JWT, Docker
- Built a backend system for managing event invitations via QR codes with participant management and attendance tracking. - Designed PostgreSQL schema with sqlc code generation for type-safe, compile-time-checked database queries. - Implemented JWT (HS256) authentication with bcrypt password hashing for admin endpoints. - Integrated QR code generation (skip2/go-qrcode) and multi-channel invite delivery via WhatsApp (Meta Graph API) and email (Resend). - Used Uber Zap for structured logging and pgx for high-performance PostgreSQL connectivity.
Deneb - Finance App Python, Golang, TanStack Router, Typescript, PostgreSQL, Google ADK, YOLO, React, Better-Auth
- Built a full-stack expense tracking platform using React (Shadcn UI) and TanStack Router, delivering a modular and responsive frontend architecture. - Designed and implemented email OTP authentication (client/server) using Better-Auth for secure user access. - Developed a Golang backend with RESTful APIs to handle financial data processing and persistence in PostgreSQL. - Structured and maintained scalable API architecture, adapting endpoints as features and data models evolved. - Integrated a multi-agent, multimodal AI system (Google ADK) communicating with backend services via API. - Built a YOLO-based receipt preprocessing pipeline for image cropping and cleaning prior to storage and inference. - Versioned, deployed, and monitored ML models using MLflow, ensuring reproducibility and tracking performance.
GitAegis — CLI Secret Scanner Golang, Cobra, Tree-sitter, Git
- Implement CLI tool to detect secrets and API keys through entropy calculation method. - Integrate <code>tree-sitter</code> for optimized and accurate code structure and entropy calculation. - Built configurable scanning via CLI flags and <code>.toml</code> configuration. - Generated structured JSON outputs and automated <code>.gitignore</code> updates to prevent secret leaks.

Big Data File Processing of IoT Data PySpark, Kafka, Zookeeper, MongoDB, Matplotlib

- Designed and implemented a real-time streaming pipeline using Kafka (3 producers) for IoT data ingestion.
- Built PySpark processing layer for transformation, enrichment, and anomaly detection using custom UDFs.
- Modeled and implemented a MongoDB data warehouse schema with optimized upsert strategies.
- Enabled event-driven visualization using MongoDB change streams and Matplotlib.
- Delivered a scalable pipeline for continuous ingestion, processing, and analysis of streaming data.

TECHNICAL SKILL

Languages: Golang, Python, Java, SQL, TypeScript

Backend & Systems: REST APIs, PostgreSQL, MongoDB, Kafka, Spark

Tools: Docker, Github Action, Docker Compose, Telemetry.
