## PROFESSIONAL SUMMARY

Data-oriented software engineer skilled across backend systems, AI/ML pipelines, and full-stack development. Experienced in building RESTful APIs with Go and Python, designing streaming data pipelines with Kafka and PySpark, and integrating LLM-based multi-agent systems using Google ADK and LangChain. Comfortable with end-to-end project delivery — from database design and CI/CD to frontend UI — and driven to ship scalable products with clean engineering.

## WORK EXPERIENCE

**Data Analyst Trainee in CDP Team**  
SynergyXYZ

Nov 2024 — Feb 2025  
*Puchong Jaya, Selangor*

- Evaluated 20+ Customer Data Platform vendors on integration capabilities, features, and pricing for client recommendations.
- Compiled client-facing proposal decks and authored early-version SDK and workflow documentation for internal engineering use.

## VOLUNTEER EXPERIENCE

**Website Admin**  
PPI Monash Malaysia

July 2024 — Nov 2025  
*Subang Jaya, Selangor*

- Led WordPress revamp project and published written and video content.
- Supported event coordination and digital presence beyond web administration.

## PROJECTS

**Deneb — Full-Stack Finance App** Go, Python, React, TanStack Router, PostgreSQL, Google ADK, YOLO, Better-Auth

- Built a full-stack expense tracker with Go REST APIs, React + Shadcn UI, and TanStack Router for modular frontend architecture.
- Implemented email OTP authentication via Better-Auth and designed PostgreSQL schema with versioned API endpoints.
- Integrated a multimodal multi-agent AI system (Google ADK) for receipt scanning, categorization, and financial Q&A via Telegram bot.
- Built a YOLO-based receipt preprocessing pipeline and tracked ML model versions with MLflow.

**QR Invite — Event QR Invitation System** Go, PostgreSQL, sqlc, JWT, Docker

- Built a backend event invitation system with QR code generation, participant management, and attendance tracking.
- Designed PostgreSQL schema with sqlc for type-safe, compile-time-checked queries and JWT (HS256) authentication.
- Integrated multi-channel delivery via WhatsApp (Meta Graph API) and email (Resend) with structured logging via Zap.

**Big Data IoT Stream Processing** PySpark, Kafka, MongoDB, Matplotlib

- Designed a real-time streaming pipeline with 3 Kafka producers for IoT data ingestion and PySpark for transformation.
- Built custom UDFs for anomaly detection and implemented MongoDB data warehouse with optimized upsert strategies.
- Enabled event-driven visualization using MongoDB change streams and Matplotlib for live monitoring dashboards.

**GitAegis — CLI Secret Scanner** Go, Cobra, Tree-sitter, Git

- Built a CLI tool detecting secrets and API keys via Shannon entropy calculation and Tree-sitter AST parsing.
- Implemented configurable scanning via CLI flags and .toml configuration with structured JSON output and automated .gitignore updates.

**Granarium — Read-Only GitHub Frontend** Bun, React, TypeScript, Shiki, GitHub API, Docker

- Built a premium code browser consuming the GitHub REST API with server-proxied calls for repo, file, commit, and pull request views.
- Implemented Shiki-powered syntax highlighting, interactive file trees, side-by-side diff viewers, and commit graph visualization.
- Architected a performant Bun backend with Express-style routing and Dockerized deployment.

TECHNICAL SKILLS

---

**Languages:** Go, Python, TypeScript, Java, SQL, R  
**Backend & APIs:** REST APIs, PostgreSQL, MongoDB, pgx, sqlc, Authentication (JWT, OTP, bcrypt)  
**AI/ML & Data:** Google ADK, LangChain, LLMs, RAG, YOLO, Scikit-Learn, PyTorch, Pandas, PySpark, NLP  
**Infrastructure:** Docker, Kafka, GitHub Actions, MLflow, Git, Zookeeper  
**Frontend:** React, TanStack Router, Shadcn UI
