PROFESSIONAL SUMMARY

Computer Science graduate specializing in AI/ML engineering, with hands-on experience building LLM-powered platforms, RAG pipelines, and multi-agent AI systems. Skilled in Python, Golang, and modern ML frameworks, with project experience spanning NLP, computer vision (YOLO), and large-scale data processing. Proficient in end-to-end ML system design from data ingestion and preprocessing to model deployment and monitoring.

WORK EXPERIENCE

Data Analyst Trainee in CDP Team
SynergyXYZ

Nov 2024 — Feb 2025
Puchong Jaya, Selangor

- Evaluated and maintained 20+ Customer Data Platform (CDP) vendors, analyzing features, pricing, and integration capabilities.
- Contributed to defining service offerings and solution positioning within the CDP team.
- Assisting in client research and compiling proposal decks for 3 different client.
- Authored early-version of CDP platform SDK and workflow documentations for internal use.

PROJECTS

Patent Analyzer

Python, Django, OpenAI, TogetherAI, QdrantDB, Selenium

- Built an end-to-end patent analysis platform using TRIZ principles and LLM reasoning to extract structured insights from raw patent documents.
- Designed and implemented a hybrid search using QdrantDB for user QA with data of 10k tokens to ensure accuracy between semantic and keyword.
- Developed automated data ingestion pipeline (BeautifulSoup, Selenium) for large-scale patent text extraction.
- Implemented Chain-of-Thought prompting strategies to improve classification accuracy and reasoning quality.

Deneb - Finance App

Python, Golang, TanStack Router, Typescript, PostgreSQL, Google ADK, YOLO, React, Better-Auth

- Built a full-stack expense tracking platform using React (Shadcn UI) and TanStack Router, delivering a modular and responsive frontend architecture.
- Designed and implemented email OTP authentication (client/server) using Better-Auth for secure user access.
- Developed a Golang backend with RESTful APIs to handle financial data processing and persistence in PostgreSQL.
- Structured and maintained scalable API architecture, adapting endpoints as features and data models evolved.
- Integrated a multi-agent, multimodal AI system (Google ADK) communicating with backend services via API.
- Built a YOLO-based receipt preprocessing pipeline for image cropping and cleaning prior to storage and inference.
- Versioned, deployed, and monitored ML models using MLflow, ensuring reproducibility and tracking performance.

Big Data File Processing of IoT Data

PySpark, Kafka, Zookeeper, MongoDB, Matplotlib

- Designed and implemented a real-time streaming pipeline using Kafka (3 producers) for IoT data ingestion.
- Built PySpark processing layer for transformation, enrichment, and anomaly detection using custom UDFs.
- Modeled and implemented a MongoDB data warehouse schema with optimized upsert strategies.
- Enabled event-driven visualization using MongoDB change streams and Matplotlib.

- Delivered a scalable pipeline for continuous ingestion, processing, and analysis of streaming data.

TECHNICAL SKILLS

Languages: Python, Golang, SQL, R
AI/ML & Data: PyTorch, Scikit-Learn, XGBoost, LangChain, Pandas, Polars, NLP, Computer Vision, RAG Pipelines
MLOps & Infrastructure: Docker, MLflow, Git, GitHub Actions, Kafka, Spark, QdrantDB
Frameworks: Google ADK, Django, FastAPI, BeautifulSoup4, Selenium

EDUCATION

Monash University Malaysia	Subang Jaya, Selangor
<i>Bachelor of Computer Science in Data Science</i>	<i>Feb 2023 — Nov 2025</i>
• Relevant Coursework: Data Structure and Algorithm, Data Management and Warehousing, Data Modelling, Computation Theory, Data Analytics, Data Visualization, Object-Oriented Programming, App Development in Android, Big Data Processing, Discrete Math, Continuous Math, Microeconomics	
Monash College	Subang jaya, Selangor
<i>Diploma of Higher Education Study in Information Technology</i>	<i>feb 2021 — Nov 2022</i>
