EDUCATION

Monash University Malaysia

Bachelor of Computer Science in Data Science

Subang Jaya, Selangor

Feb 2023 — Nov 2025

- Relevant Coursework: Data Structure and Algorithm, Data Management and Warehousing, Data Modelling, Computation Theory, Data Analytics, Data Visualization, Object-Oriented Programming, App Development in Android, Big Data Processing, Discrete Math, Continuous Math, Microeconomics

Monash College

Diploma of Higher Education Study in Information Technology

Subang jaya, Selangor

feb 2021 — Nov 2022

WORK EXPERIENCE

Data Analyst Trainee in CDP Team

SynergyXYZ

Nov 2024 — Feb 2025

Puchong Jaya, Selangor

- Research Customer Data Platforms vendors, document and evaluate their offerings.
- Formulate service CDP offerings for prospective client and compile a proposal deck on it.
- Compile technical documents surround a CDP tool.
- Plan overall directions of CDP team with supervisors.
- Gained experience in using Google Ads.

VOLUNTEER EXPERIENCE

Website Admin

PPI Monash Malaysia

July 2024 — Nov 2025

Subang Jaya, Selangor

- Plan and executing total revamp of PPI Eunoia Wordpress website.
- Publishing writtten and video content on the PPI Eunoia Website.
- Assisting in PPI Monash Event program, beyond web administration.

PROJECTS

Patent Analyzer Python, Django, OpenAI, TogetherAI, QdrantDB, Selenium

- As a Final Year Project, my team and I implemented a patent document analyzer on TRIZ principles using a decoder LLM model.
- I implemented most backend components such as; automated text extraction using bs4, Chain of thought prompting, and hybrid RAG search through qdrantDB.
- Developed and adapted a manual classification method into chain-of-thoughts and modified vector search method.
- Delivered a deployable patent analysis platform capable of structured, principle-based insights from raw patent documents.

Big Data File Processing of IoT Data PySpark, Kafka, Zookeeper, MongoDB, Matplotlib

- Designed and implemented a data warehouse schema in MongoDB for IoT data, defining collection relationships and an upsert strategy.
- Built a Kafka Pub/Sub system to ingest and process real-time streams from three distinct IoT sources.
- Used PySpark for real-time preprocessing, transformation, and custom anomaly detection via User-Defined Functions (UDFs).
- Persisted processed and joined data back into MongoDB and used change streams to trigger dynamic visualizations with Matplotlib.

GitAegis — CLI Secret Scanner Golang, Cobra, Tree-sitter, Git

- Built a CLI tool to detect secrets and API keys using entropy analysis to solve problem I faced during development.
- Main features it has are entropy calculation, Tree-sitter, configurable parameters through CLI and .toml file.
- Enable reliable secret detection before commits, producing JSON output and update .gitignore.

TECHNICAL SKILL

Languages: Python, Java, Golang, SQL, R, TypeScript, HTML, json.

Developer Tools: Wordpress(CMS), Git, Docker, Kafka, Spark, Huggingface, Github Action, MongoDB, QdrantDB.

Libraries/Framework:Matplotlib, Pandas, Flask, Google ADK, BeautifulSoup4, ScikitLearn, XGBoost.
